Conformational entropic barriers in topology-dependent protein folding: perspectives from a simple native-centric polymer model

S Wallin and H S Chan 2006 *J. Phys.: Condens. Matter* **218** S307-S328

In table 1 on page S313, for Coicilin E9 immunity protein (PDB id 1imq), the chain length N should be 86 and the folding rate k_f should be $1.5 \times 10^3 \text{s}^{-1}$. These errors were merely typographical and had no effect on the results and conclusions of the paper.
